Computer Science

Music Player Project

In this project you will be leveraging two libraries in Python to create a music player. You will need to download 3 mp3 files and Album Art into your python project.

Then you will do the following

-Create a playlist data structure to hold the song location, information and album art link.

-Create a virtual environment and install the pillow and pygame libraries.

-Allow the user to select a song from the playlist and play the song

-Skip to another song

-Show album art when a song loads

EXTENSION

Make new file copy code over

Add tkinter GUI
